

SRI RAMANA MATRICULATION SCHOOL

BUILDING PROJECT

Introduction

Since 1988, Sri Ramana Matriculation School has been functioning in Tiruvannamalai. It has been supporting the needy children in the community in their quality English Medium education to uplift their life standard. Many downtrodden children became engineers, lawyers, teachers and so on and supporting their families. The school is funded by the nonprofit Arunachalam Trust and the Trust is supported by well-wishers.

The School

The school has KG to X Standard of 12 classes and it is a co-education school. That is boys and girls of ages from 3 years to 15 years old are studying in the school. It has minimum strength of around 20 children in a class to provide optimum concentration on them. Well qualified teachers work in the school.

Land

Since from 1988, the school had been functioning in many rented buildings and had small class rooms. The Government of Tamil Nadu forced on schools of strict rules in 2003 that the schools should have three acres of land and with spacious class rooms in one place with all proper infrastructures. So, the school bought the existing land of three acres in 2006.

Building

The construction of the class rooms started in 2010. Each class room size as 20' X20' was constructed spaciouly. 12 class rooms, one office room, one library, a common laboratory and toilets for boys, girls and staff were constructed for KG to X standard. And the school was shifted from older place to the new existing place in 2013. The existing building could accommodate KG to X standard as per the government norms.

Parents' Expectation

Each class has less strength and the teachers care to the children is more. So, the students appear in the Government Public Examination could easily succeed and also could score more marks. So, all the parents' expectation is that their children should continue their studies of Eleventh and Twelfth Standard here in this school itself.

Needed

To have Eleventh and Twelfth Standard in the school, it needed 8 more rooms. The class rooms required for Eleventh and Twelfth Standard are 4 and separate laboratories for Computer, Physics, Chemistry and Biology required are 4. So, totally 8 rooms should be constructed newly to have the Higher Secondary classes in the school. These 8 rooms could be constructed on the first floor of the existing building. Already 4 rooms constructed on the middle part of the first floor. At the either side of the middle part each side four rooms could be constructed.

Cost

One class room size with open varanda outside is 660 square feet. Construction of one square foot is INR 750 (11 USD). So, the cost of constructing one class room is INR 495,000 (7,220 USD). It will take five to six months of period to finish. If the construction is started in February, it could be finished before June. As the parents' and children's wish, the school could have the Higher Secondary classes in the coming academic year itself.

Support

More needy poor children could benefit by this school building project. So, your favorable support is needed. It may be a penny is welcome to this noble task. Your favorite name may be named after a room, if you fully support to construct a room.

***Not all of us can do great things, but we can do small things with great love.
- Mother Teresa***
